

## Thermo Scientific Locator Cryogenic Rack & Box Systems

The Thermo Scientific Locator inventory systems makes cell sample retrieval quick and easy.

Locator Rack & Box System simplifies sample storage and retrieval with unique hanging rack and gridded box design, advanced vacuum insulation, unmatched temperature uniformity, and an innovative liquid nitrogen monitor.

Compact design minimizes space requirements while maximizing storage capacity. Suited for both manual and computerized inventory record-keeping methods. Super-insulated vessels have special, narrow-mouth design that conserves liquid nitrogen by minimizing evaporation.

- Outstanding temperature uniformity: samples are stored below  $-180^{\circ}\text{C}$ , even when less than 2" (5cm) of liquid nitrogen remains in the vessel
- Ultrasonic Level Monitor safeguards irreplaceable samples with minimal liquid nitrogen evaporation and conduction
- Advanced vacuum insulation minimizes liquid nitrogen evaporation and reduces operating costs
- Optional monitor provides continuous LED readout of liquid nitrogen level; activates visual and audible alarms when level falls below safe range of approximately 1" (2.5cm)

- Optional alarm also alerts operator in the event of excessive liquid nitrogen loss
- Secure locking hasp prevents unauthorized entry

**Includes:** Stainless-steel indexed racks that fit into corresponding locations in the vessel. Each rack has individual storage compartments that hold one Nalgene\* Cryogenic Storage Box.

**Requires:** Nalgene Cryogenic Storage Boxes (order separately). Each box has individually numbered storage areas for use with vials sized 2.0mL and smaller.

**Warranty:** Three-year warranty on vessel vacuum, one year on parts and level monitor

Static evaporation rates and holding times are based on new vessel performance, without any product load, or lid openings, and in a controlled environment. Actual working performance will vary with individual applications. Excludes supply tank evaporation. Total LN2 consumption will vary greatly depending on product loads, lid openings, fill cycles, and supply tank evaporation rate.
